

Responsible AI Policy

Objective

The objective of this policy is to ensure that AI systems used within HireGuard AI operate ethically, responsibly, and transparently.

Core Responsible AI Principles

Fairness

AI systems must provide equitable recommendations and avoid unfair bias.

Reliability

Models and workflows must operate consistently and undergo regular validation.

Safety

AI-generated recommendations must not create legal, ethical, or operational harm.

Privacy & Security

Sensitive candidate data must be securely processed and protected.

Transparency

Users must be able to understand how AI recommendations are generated.

Human-Centered Design

The platform should augment recruiters rather than replace human judgment.

Monitoring & Evaluation

Responsible AI monitoring includes:

- bias evaluation
- hallucination detection
- governance scoring validation
- workflow audit reviews
- human feedback collection

AI Limitations

Users must understand that:

- AI recommendations may contain inaccuracies
- outputs should be reviewed by humans
- models may evolve over time
- confidence scores do not guarantee correctness

Incident Handling

Any AI governance incident must be documented and escalated through audit workflows.

Continuous Improvement

Feedback loops and periodic evaluations will be used to improve:

- model quality
- governance accuracy
- explainability
- fairness metrics
